

High Speed Bundle Management

The ALTS-300/420 Automatic Laundry Tying Station can help you efficiently move bundles through the tying process by automatically orienting the bundles and reducing labor costs. The ALTS-300/420 combines an enhanced Felins 2000 series tyer with a state-of-the-art bundle transfer unit. Together, this fully integrated system provides processing plants with the most efficient, high speed bundle management solution available; coupled with the reliable equipment performance that users have come to expect from all Felins tying machines.

Increased Productivity and Lower Costs

By offering speeds up to 900 bundles per hour the ALTS-300/420 will allow you to reduce your cycle time while increasing throughput and eliminating unnecessary handling. Felins tying materials are available in twine, polytape and elastomer; designed to provide maximum efficiency in the bundling process further reducing the total bundling cost.

Built To Your Specification

Felins' engineering team will work closely with you to identify and meet your specific product and processing needs. Felins offers fully integrated systems that include automated in-feed, incline, merge and lift gate conveyors, traffic control, material handling and accumulation to maximize throughput and reduce labor from your folders to the dock door.

Removable Tying Module with Service Stand

Felins understands that down time can affect the profits of every processing plant which is why we have designed a fully removable tying module with powered service stand for the ALTS-300/420.

- Tying module can be removed in less than 5 minutes
- Simulates tying operation for serviceability
- Great for preventive maintenance programs
- Jog button manually controls cycling process
- Moves easily on rolling casters
