

TURBO 2000

A compact unit that allows laundry facilities to move from stand alone equipment to an automated system. The Turbo 2000 incorporates the Felins 2000 Series tyer to convey, tie and discharge bundles automatically. This system can be placed directly at the end of the

ALTS300/420

The ALTS300/420 is a tying station that is able to automatically orient, tie, center and transfer bundles; offering users improved bundle throughput and labor savings. The standard unit is available in two sizes. Custom sizes are available to meet specific user requirements.

Traffic Control Master (TCM) System

The Traffic Control Master (TCM) System is designed to allow continuous workflow from any type of discharge and stacker. Bundles are automatically merged from the discharge or stacker unit onto a main line conveyor while maintaining appropriate bundle spacing, orientation and stability. The TCM System allows laundries to maximize their labor efficiency by reducing the labor associated with the handling of flat wear and dry fold products.

Transfer Systems

Felins offers multiple Transfer Systems that are designed to received stacked bundles and position them for transfer at a 90° right angle. Bundles are centered and consistently presented to an automated bundling station without handling. The Felins transfer systems include the Corner Line Pusher, the Bundle Identification System and the Bi-Directional Unit.

- **Corner Line Pusher** – is used at the end of a main conveyor prior to the tying process
- **Bundle Identification System** – identifies bundles of a specific size for tying while allowing bundles of different sizes to pass through the tying station
- **Bi-Directional Unit** - designed to receive bundles from two opposing product streams

Custom Conveyor Systems

Felins Conveyor Systems offer the latest in product transportation components including Conveyor Lift Gates, Corner Belt, Incline, Accumulation Roller and custom designed Main Line Belt Conveyors. These components combined with the Felins Traffic Control Master (TCM) Systems and automated tying or wrapping stations provide the most effective, high speed bundle finishing system for your facility.
